

First steps in a long walk

Objectius

- .To recognise the content related to the Solar System.
- .To work cooperatively.
- .To use ICT tools.

Descripció de la proposta

Students will learn about celestial bodies in the Universe. Students will work in groups with parts of a text about the universe. They choose the correct title for their paragraph and read it to the others with the help of a mindmap using an ICT tool. Later, teacher reads a text about moon facts. In pairs, they have to put in order the pictures in the dictogloss activity and try to remember as much as possible about the text. Then it's time to put in words what they have done in the previous activity in order to work on students' writing skills. This project is a result of a GEP1 project.

Aspectes didàctics i metodològics

These four sessions are based on a CLIL approach.. There are different reading and writing strategies seen in the GEP course. The assessment tools shown in the sessions have been very useful when designing the rubric and checklist in my activities. The inclusion of ICT tools are due to the resources offered by our tutors.

Recursos emprats

Continguts, competències i processos que es treballen de forma destacada

Science:

- main celestial bodies in the Solar System.
- stars and galaxies.
- space exploration
- moon facts
- ICT tools.
- work in a cooperative way.
- hypotheses expression.
- learning strategies such as dictogloss and rubric.

English:

- vocabulary related to the Solar System.
- language structures to write about Moon facts.
- main ideas and key words organised in paragraphs.
- language structures when making hypotheses: I think, I guess, In my opinion...

Alumnat a qui s'adreça especialment

5th level.Primary School

Interdisciplinarietat, transversalitat, relacions amb l'entorn

Science.
