

## How do organisms reproduce?

### Objectius

- . to be able to compare and contrast between sexual and asexual reproduction
- .to recognise advantages and disadvantages of sexual and asexual reproduction.
- .to be able to compare and contrast viviparous, oviparous and ovoviviparous animals.
- .to name the different parts of a flower and how explain how they reproduce.

### Descripció de la proposta

All organisms are reproduced, in one way or another, to ensure the survival of their species. We will work on the different types of reproduction, as well as the reproduction of plants and animals, and we try to answer our students' questions about the topic. This project is a result of a GEP1 programme.

### Aspectes didàctics i metodològics

These two sessions are based on a CLIL approach. In this lesson plan we try to make different active activities, combining pair and cooperative work of our students. Support is provided to help students read and understand texts. Before-, during- and after reading activities are prepared. Visuals are used to support comprehension. The writing process takes place in joint collaboration with the teacher modelling. Support is provided to help students write since the students are provided with Language patterns, Language frames and vocabulary banks. The teacher uses different strategies to help students throughout. The teacher uses different strategies to help students throughout the process of reading and writing. The teacher has previously predicted the language the students will need when carrying out the different tasks successfully and, therefore, is aware of the content-obligatory language.
