

## The little Prince visits the Earth

### Objectius

- To recognise the general characteristics of the Earth: situation in the solar system, size, satellites, composition, organization of the planet (meridians, hemispheres and parallels), rotation of the Earth.
- To be able to recognise the continents: geographical location, size, remarkable natural elements, most important countries and population.
- To name the oceans: geographical situation, size and general characteristics.
- To be concerned with the environment.

### Descripció de la proposta

We will watch a video message sent to us by the Little Prince in which he asks us for help to learn things about our planet , the Earth. After watching the video the students will work in groups to get information about different topics of the Earth (situation in the solar system, organization of the planet, rotation of the Earth, its continents and the importance of the caring for the environment) to be able to explain it to the Little Prince. Later, we will consolidate the learning and make a self-assessment about the knowledge of the Earth in groups This project is a result of a GEP1 programme.

### Aspectes didàctics i metodològics

These two sessions are based on a CLIL approach. We want to highlight the fact that there is an element that will connect the sessions with the rest of the work that students are doing every day at school. This element will act in a motivating way and we hope that it helps the students

to feel more confident and safe in the sessions since it is a subject that they know previously and that they have worked from the different areas. In all the activities, we will always be present in the classroom two teachers, the tutor of the group and the English specialist.
